

LUSCOMBE AIRPLANE CORPORATION  
West Trenton, New Jersey

-----  
ENGINEERING BULLETIN NO. 9

December 29, 1939

The heat output of the heaters provided with our single opening exhaust system can be increased by incorporating changes as follows:

1. Remove the ring shaped baffles from both halves of the muff. (Marked "A" on sketch.)
2. Relocate ring shaped baffles at right and so as to close off air flow.
3. Install metal strip baffle (furnished) between halves of muff as shown in sketch.
